

San Juan Capistrano Garden Club

President's Message

February 2026

As we head into the last full month of winter, I keep watching the plants in my yard show signs of waking up. Those that are not yet alive with new growth are still good targets for pruning. February has typically been one of the雨iest months in SoCal; no telling if that will be true this year. Fortunately, we've had some rain every month since October and we're no longer in a drought. Even so, I might do some irrigating if the weather is warm and rain is not in the forecast. This is the month I typically start deciding what seeds I will need for this summer. The cool air and cold soil temperatures this month are not conducive to seed germination outdoors for the summer edibles. The end of the month is the perfect time to start seeds indoors or in a greenhouse in order to have plants ready to put in the yard by the end of March or early April.

We opted to have a meeting with a speaker this month instead of a field trip. Our presentation this month on soil is apropos as February is also a good time to start soil prep during dry periods. Next month we'll have another speaker and then a field trip in April. We always welcome guests and prospective members at our meetings, so please encourage others to come join us.

Valentine's Day is a great time to enjoy all the beautiful floral displays in stores. While I personally don't need a dozen roses that cost a lot and don't really last very long; fresh flowers of any kind in the house do bring joy. The best for me is the sentiment of loving and appreciating the family and friends around us, with or without flowers and candy.

Garden Stroll

AT RISK

We are sad to let you know that we don't have enough gardens yet for a Garden Stroll this May. While including a non-member garden or two is possible, we believe that the stroll should have a majority of member gardens. With one potential member garden and one potential non-member garden already identified, we now need at least 2 member gardens.

Without commitments for at least 4 gardens within a week after our meeting this month (by February 23), the Stroll for 2026 will be cancelled.

Your garden doesn't have to be perfect or large. You don't have to spend money on new plants or landscaping work. We are happy to visit gardens in their "natural" state.

Please consider volunteering your yard or urging a member you know who has a yard that would be good for our stroll to volunteer their yard.

January Speaker

Thanks to Kathy Rowley for all these great pics

BIG THANKS!

Thanks from SCMFO for your support!

Saturday, January 31 was a wonderful blue-sky day. And, as you can see in the pictures below, there were lots of smiling faces.

Many local organizations donated car seats, pack-n-plays, and other large items.

Hoag Memorial Hospital donated a truck-full of diapers and formula.

SCMFO set up appointments for 46 moms.

Teams of volunteers packed layettes, set-up pop-ups for shade, unloaded trucks and greeted the families.

Several of the expectant moms were active-duty as well as their spouses.

It was a beautiful day.

Thanks to Karen Rottmann
for all these great pics

Grow Sage Once — Let It Work for Your Garden All Year

Low-Maintenance Herb

Plant once, enjoy sage for years with hardly any fuss.

Full Sun, Dry Feet

Give sage lots of sun and well-drained soil—skip the daily watering.

Happy in Pots or Beds

Grow in raised beds, borders, or a sunny pot on your porch or sill.

Natural Pest Shield

Scented leaves help deter cabbage moths, carrot flies, and mosquitoes.

Pollinator Magnet

Purple blooms invite bees and butterflies to your whole garden.

Tomato's Best Friend

Plant near tomatoes to help repel hornworms and boost flavor.

Kitchen Workhorse

Snip fresh leaves for roasts, beans, herb butter, and more.

Soothing Sage Tea

Steep a few leaves for a gentle, throat-kind, digestive tea.

Potpourri From Your Garden

Scent is a powerful memory inducer, and nothing conjures up visions of holidays past better than the fragrance of pine, bay and cinnamon. Potpourri is a blend of aromatic and colorful flowers and leaves, displayed in an open container so the scents can permeate the room. Your garden plants can provide ingredients for this easy-to-make and personalized gift for the holidays. And all those wonderful aromas wafting about as you mix the ingredients will give you some much-needed stress relief during this hectic time of year!

In addition to dried flowers and leaves, potpourri can contain spices and peels, fixatives that absorb and hold the scent, and essential oils that intensify the scent.

Fixatives and Oils

Spices and peels include whole cloves, cinnamon sticks, star anise and orange peel. Orris root (a whitish powder) is a common fixative. There are dozens of essential oils. Consider adding a rose geranium oil to dried rose petals, citrus essential oil to dried orange peels, or pine oil to miniature pinecones. Use essential oil sparingly, adding it one drop at a time so its fragrance doesn't overpower the mixture. Orris root, bulk spices and essential oils can be found at health food stores.

Flowers and Foliage

Scented flowers include roses (especially the old-fashioned varieties), lavender, orange blossoms and stocks. Blossoms for color include borage, calendula, bachelor's buttons, blanket flowers and zinnias. Fragrant foliage includes herbs such as basil, bay, lemon balm, lemon verbena, sage, rosemary, thyme, mint and scented geraniums. Also consider intensely fragrant landscape plants, such as Chaparral sage (*Salvia clevelandii*) and Mt. Lemmon marigold (*Tagetes palmeri*).

Drying Plants

Harvest plants when they are completely dry. Pick in the morning when essential oils in the plants are most intense. Choose flowers that have just barely opened as they will have stronger scents. Cut stalks as long as possible, and tie a few stems together tightly or use rubber bands. Hang upside down in a dry, dark area with good ventilation. The desert's low humidity speeds the drying process.

Sample Recipe

The following recipe contains ingredients currently available in gardens, but don't be afraid to personalize a blend with your favorite plants, colors and aromas. It's helpful to dry flowers and foliage throughout the year so there will be a variety of ingredients ready when you start mixing.

2-1/2 cups dried rose petals
3/4 cup dried mint leaves
3/4 cup dried scented geranium leaves
6 tablespoons dried orange, lemon or lime peel
1 tablespoon orris root
3-6 drops rose geranium essential oil

Gently mix together dried ingredients. Add essential oil 1 drop at a time and remix. Put it all in an oversized, closed container in a cool, dark place for three to six weeks. Shake the container 2 or 3 times a week to mix the scent.

Laguna Beach Garden Club 

February in the Garden

- Plant bulbs such as amaryllis, lilies & gladiolus
- Plant cool season vegetables, bare root trees, and berries
- Tackle early aphids with a strong spray of water from garden hose
- Mulch 2-4 inches thick, keeping away from tree and plant trunks
- Keep on top of weeds, which are easily pulled after the rain
- Clean up empty garden pots, with a diluted solution of 1 part bleach to 9 parts water

Restoring Butterfly Garden/Monarch Waystation

Have you visited the butterfly gardens lately? Please reach out to Lynn Rollison to join this dedicated group.

We are still meeting the 2nd & 4th Mondays at 9am. The garden had a bountiful spring and summer. It's about time to do some cutting back. And we are starting to think about what we can add to give us fall and winter color. Two of our members have donated beautiful benches and a table, and another donated a sun dial. Come out and join us.

Lynn Rollison

Ever notice how uncanny animal camouflage is, these animals disappear into their environments like a Ninja!

Oak-killing Beetle

A man uses limewash on an oak tree to try to kill the tiny invaders in Orange County in 2024.

*As we know from our relationship with Earthroots, this caption is incorrect.
They are experimenting with limewash as a PREVENTATIVE measure.*

Oak-killing beetle significantly expands its range in Southland **L.A. Times January 15, 2026**

This is the farthest north the goldspotted oak borer has been found in the state. Given the less-than-one-half-inch insect's track record of devastating oaks since being first detected in San Diego County in 2008, scientists and land stewards are alarmed and working to contain the outbreak.

"We keep seeing these oak groves getting infested and declining, and a lot of oak mortality," said Beatriz Nobua-Behrmann, an ecologist with UC Agriculture and Natural Resources. "And as we go north, we have tons of oak woodlands that are very important ecosystems over there. It can even get into the Sierras if we don't stop it. So it is scary." For the full story:

https://www.magzter.com/stories/newspaper/Los-Angeles-Times/OAKKILLING-BEETLE-SIGNIFICANTLY-EXPANDS-ITS-RANGE-IN-SOUTHLAND?srstid=AfmBOooZ27cBYOn6_G7WGxoIEuSwXzFELfqjwkuuIyHYooKlzmVOR_AL

WHAT ON EARTH IS Gravitropism?????

Have you ever wondered how a seed planted upside-down still manages to send its roots down and its shoot up? Plants have tiny gravity sensors inside their cells - microscopic starch granules that settle to the bottom like ball bearings in a tilted bowl. When these granules pile up on one side, they trigger the plant to pump more growth hormone (auxin) to that side.

And the design is even more amazing: auxin has opposite effects on roots versus shoots. In roots, it slows growth, so the bottom side grows slower and the root curves downward. In stems, it speeds up growth, so the bottom side grows faster and pushes the stem upward. the same signal causes two different responses, making roots dig deep while shoots reach up.

SMALL BITE, BIG THREAT

**YOU CAN HELP
PREVENT MOSQUITO BREEDING!**

UC Master Gardeners of Orange County's Post

Help prevent Mosquito Breeding in your own garden! 

Did you know that female mosquitos need your blood to develop their eggs? And in return they leave you with an annoying itchy red bump. Or worse!

There have been cases of West Nile Virus here in Orange County recently. This is a serious illness for children, elderly and those with immune issues.

So, what can you do? For one, avoid overwatering. We can do frequent checks around our yards, patios and balconies for any standing water – even a small puddle of water can be a breeding area for the mosquito to lay her eggs. Especially after a rainstorm, areas to be checked could be:

- Empty containers

- Rain gutters

- Pet dishes

- Bird baths

- Neglected pools

- Ponds

- Uncovered trashcans

Low areas in the pavement

Knowledge is power. You can help prevent mosquito breeding in your own backyard!

Perhaps the most important lesson I learned when I began gardening in California and wanted success with certain perennials, trees, shrubs, and annuals, was the information on soil from Gary Matsuoka. Fortunately he is still teaching the concepts below. It is worth a trip to his Saturday classes at his nursery! The Soil Class is held several times a year.
